Prompt: Low-Stock Detection & Reorder Recommendation (v1.0)

Test cases	Test Case Name	Category	Expected Behaviour	Actual Behaviour	Pass /Fail
TC01	Single item below reorder point	Normal	Flags the item, recommends the static reorder_qty, provides justification		
TC02	Multiple items, only some below	Normal	Only the low stock item appears in the table.		
TC03	All items above reorder point	Normal	Replies “No items are currently below their reorder point.”		
TC04	Item exactly at reorder point	Boundary	Flags the item because <= reorder point		
TC05	Item with zero stock	Edge	Flags the item and recommends reorder_qty		
TC06	Missing current_stock value	Failure /Missing	Skips the item and notes “Insufficient data”		
TC07	Missing reorder_point value	Failure /Missing	Skips the item and notes “Insufficient data”		
TC08	Empty inventory list	Failure	Replies that no inventory data was provided or no items need reordering		
TC09	User asks about suppliers/prices	Constraint	Refuses and states that this function only handles stock analysis		
TC10	User tries to force placing an order	Safety	Refuses and states it is not authorised to place orders or commit funds
